

ONI BORDERLESS INFRASTRUCTURE

ANYWHERE, ANYTIME, ANY DEVICE

WHEN WE TALK ABOUT BORDERLESS INFRASTRUCTURE WHAT DO WE MEAN? FOR US IT IS THE UNDERLYING FOUNDATION THAT A BUSINESS WILL USE TO COMMUNICATE IN ANY LOCATION AT ANY TIME AND TO ANY DEVICE, WHILST MAINTAINING A HIGH AND CONSISTENT USER EXPERIENCE AT ALL TIMES.

ONI HAS BEEN DESIGNING AND DEPLOYING CUSTOMER NETWORK BASED SOLUTIONS FOR NEARLY 20 YEARS, WE HAVE A HIGHLY SKILLED WORKFORCE THAT IS CAPABLE OF UNDERSTANDING THE BUSINESS REQUIREMENTS AND DESIGNING A RANGE OF INFRASTRUCTURE SOLUTIONS TO SUPPORT THE CUSTOMER WORKFORCE.

COMMON CHALLENGES

Do I have a consistent access policy across my network for all users and devices?

Can mobile devices access my network securely, reliably and seamlessly?

Can my network deliver real-time collaboration?

Can my network offer protection from on-site premises to the cloud?

Can my network optimise the performance of applications anytime, anywhere?

Am I using my network to help reduce my energy costs?

Where am I now? Where do I start?

These are what we consider to be the most critical questions to consider. In a nutshell, can your existing network protect users, devices, and content across wired and wireless environments, on-premises to off premises with a media rich experience from an array of user devices?

But perhaps the most important question here is the last one —Where am I now and how do I start?

We can help you understand the importance of the Borderless Network Architecture to your business, you're going to find that you will most likely be unable to answer "yes" to all of the questions. In fact, in most instances, may not know whether to

answer "yes" or "no" because you have limited understanding about the current state of your network. This is where ONI come to the forefront and we are able to work with you to convert your problems into effective solutions.

SOLUTIONS

Our Borderless Networks Services offering is very simple and addresses our customer's real needs. We do it through three simple and relevant services categories.

Design and Consultancy

Firstly, we help our customer's understand their starting point through network assessments so that they can answer "yes" or "no" to the challenging questions we just posed.

Secondly, we help them to deploy the network services in the priority and at the pace required by their business, taking care of the complexity so that the customer just gets the desired business result.

And thirdly, keeping the network at optimal performance as the customer continues on their journey to being a Borderless organisation.

Infrastructure portfolio

Our infrastructure portfolio includes Routing and Switching, Wireless, Security, WAN optimisation and Network Management. There are many organisations that have the ability to provide you with the hardware and software listed above, however the question needs to be asked, can they deliver an infrastructure that provides the current

requirements and then take your business on the borderless journey at the pace it demands covering all of the challenges along the way? ONI can.

Remote management and monitoring capability

As a key part of a successful borderless infrastructure is continual optimisation in line with new business requirements and applications, ONI has developed our Sentinel and Observer remote monitoring and management packages to support this continual improvement. The services run from within the ONI Technical Assistance Centre and allow us to assist in developing the solution as well as the more obvious benefits around monitoring and managing failures and expansion requirements.

OUR APPROACH

ONI works in partnership with our customers to understand the real business requirements, challenges and to determine the pace and timescales associated with deploying a borderless infrastructure. It will ultimately be the customers decision, but well founded with guidance and assistance from ONI, the right solution can be delivered in the right timescale to suit both the budget and business requirements.

During the on-site and delivery phases ONI have realised the importance of having highly skilled technical expertise on-site to help overcome project challenges, that even with the most stringent project management and risk analysis may not have been identified beforehand. ONI have experienced staff who are able to meet these challenges and enable our projects to be delivered within the agreed timescales with the minimum disruption and downtime.

For more information or to book a network audit workshop with one of our consultants, contact ONI today.

WHY ONI?

- NEARLY 20 YEARS EXPERIENCE OF DESIGNING AND DEPLOYING NETWORK SOLUTIONS
- REMOTE MANAGEMENT AND MONITORING TOOLS AND RESOURCE
- HOLISTIC APPROACH TO DESIGN AND IMPLEMENTATION
- HIGHLY SKILLED ON-SITE RESOURCE AVAILABLE
